Trouble

Growing effects of climate change and lack of awareness of caring for nature.

What will we do...

Saving nature, motivating action against climate change and predicting the loss of natural resources.

POWERED BY:

Objective

Contribute knowledge and experience to create connections between world citizens and national and international organizations using NASA information to encourage participation in social projects that reduce the effects of global warming and support nature conservation, thus contributing to preservation of life and generating social awareness.

POWERED BY:

Benefits

- *Promote social awareness to contribute to the recycling of resources and unify efforts to generate a cleaner ecosystem.*
- *Encourage participation in making more people aware of the need to create habits and customs in the local population that favor the preservation of vital resources for life.*

POWERED BY:

IDEA:

Web portal with information that helps to make people aware of the urgent need to unite to preserve basic natural resources that are losing their stability due to the exaggerated production of carbon monoxide, this effect better known as global warming (climate change)
